Photoshop:

Adobe photoshop is a graphics program that you can use to edit and create graphics. Adobe photoshop can also be used to edit photographs, and most other forms of computer graphics.

Illustrator:

Adobe Illustrator is a drawing program. The program is commonly used for graphic artists and digital artists to create and draw shapes, lines, text and import graphics and pictures.

InDesign:

InDesign is "layout software" which allows the user to combine different graphics files with text to create works such as posters, flyers, brochures, magazines, newspapers and books.

Acrobat Pro:

Adobe Acrobat allows users to view, create, manipulate, print and manage files in Portable Document Format (PDF). Acrobat is ideal for making documents or brochures that were designed for the print medium viewable electronically and capable of being shared with others on the Internet.

Fireworks:

The main purpose of Adobe Fireworks is for creating expressive, highly optimized graphics for Web, screen and various devices. With Fireworks you can make websites, user interfaces and rich Internet application (RIA) interfaces which are editable in both vector and bitmap modes. Fireworks has Pages/Master Pages, Layers, States and Symbols — all features that considerably speed up development of Web designs.

Flash:

Adobe Flash is a multimedia platform used to add animation, video, and interactivity to web pages. Flash is frequently used for advertisements, games and animations for broadcast.

Audition:

Adobe Audition software is a complete multitrack digital audio recorder, mixer and editor. The program provides a digital recording studio experience through its multitrack recording studio and is used in producing music, radio broadcasts, or audio for video.

Premiere: Elements:

Adobe Premiere Elements is a video editing software package suitable for both amateur enthusiasts and professionals. Premiere works by importing video from a source, then allowing you to create new edited versions which you can export back to tape, disc or other medium.

Dreamweaver:

Dreamweaver is an application that helps you design websites. It is used to primarily to design and code HTML and CSS but can also be used for other languages. Dreamweaver is a wysiwyg (whay you see is what you get) environment that allows developers to create code and see the design components created in real time OR to create the design (with drag and drop components) and see the code created in real time.

Microsoft Office 2010 contains the full Office suite: Word, Excel, PowerPoint, Publisher and Access.

In addition to the above software, the Media Center will also offer the following:

- Advanced webcam, microphone and speakers for videoconferencing.
- Overhead projector which can be connected to a splitter box, allowing guests to connect their laptop for presentations.

The two computers in the Media Center are Dell Precision T1650s, containing 16gb RAM, Windows 7 (64-bit) OS, an advanced graphics card and Dell Ultrasharp 27-inch Monitors.

Extra Equipment Available
(Ask for help to access equipment in cabinet)

Scanners:
